

INDEECO Introduces New Electric Baseboard Heaters

A new family of electric Baseboard Heaters for architectural, commercial and industrial applications has been introduced by INDEECO, a leading manufacturer of electric heating equipment and controls.

Architectural Baseboard Heaters (BAI/BASI Series) are designed to provide large amounts of "quiet" heat in halls, classrooms and conference rooms where fan noise is distracting and unacceptable. Constructed of heavy gauge steel, these units are available to 4 kW.

Industrial Baseboard Heaters (BII/BISI Series) are constructed of heavy gauge, painted steel with a screw assembly for additional strength and are available up to 2.5 kW.

Commercial Baseboard Heaters (BCI/BCSI Series) feature an aluminum cover with painted steel cabinetry. A light duty version (BLCI Series) is also available for limited space environments. All commercial units are available to 2.5 kW.

Architectural, commercial and industrial baseboard heaters are available with flat top or sloped top cabinets. Sloped top cabinets prevent objects from being set on top, which could restrict airflow and cause overheating. All units are available with a white or almond epoxy/polyester powder coat paint finish.

INDEECO Baseboard Heaters are CSA-approved to US (UL) standards.
