

INDEECO Launches New Cabinet Unit Heater

A new series of electric Cabinet Unit Heaters (CUI) for commercial and industrial applications has been introduced by INDEECO, a leading manufacturer of electric heating equipment and controls.

Ranging in size from 2 kW to 24 kW, CUI Series heaters may be mounted on the floor, wall or ceiling, and recessed (wall or ceiling) as required. Standard voltages include 208, 240, 277 and 480, with other voltages available on a custom basis. Lengths range from 28" to 80", depending on the kW and voltage.

CUI Series cabinets are constructed from 18-gauge steel with a white or almond epoxy/polyester powder coat finish for durability. An extruded aluminum grille discourages tampering with the finned, tubular heating element. Standard controls include built-in automatic reset thermal cutout for overtemperature protection and a fan delay relay.

The CUI Series is CSA-approved to US (UL) standards.
